FAFCO Solar Hot Water Systems Now Eligible for SMUD \$1,500 Rebate Program in Sacramento, California

CHICO, California – August 07, 2008 - FAFCO, the oldest and largest manufacturer of solar heat collectors in the U.S., today announced that its solar domestic hot water systems have been approved for Sacramento Municipal Utility District's (SMUD) rebate program. FAFCO manufactures SunGrabber, Hot2o, and Revolution systems, which are designed to reduce home water heating costs and dependency on fossil fuels by up to 50%.

The three FAFCO products are certified by the Solar Rating and Certification Corporation (SRCC), approved by SMUD, and backed by extended warranties.

“Through this rebate program, SMUD offers a significant financial incentive for Sacramento residents to use solar thermal technology to reduce their energy use,” said Robert Leckinger, president of FAFCO. “FAFCO is leading the industry with its affordable, lightweight, easy-to-install, all-polymer solar hot water systems, and is proud to be a part of SMUD's energy-savings programs.”

To be eligible for a \$1,500 rebate, homeowners need to have an electric water heater, use a SMUD participating contractor for installation of the solar water heating system, and be willing to complete a SMUD inspection. Financing is available for SMUD residential customers who have electric water heating.
